

LEGALESE.COM

WILL SOON RAISE AN ANGEL ROUND

TL;DR

FULL TEXT — 🔊

INDIV ALL MEN BY THESE PRESENTS that WONG MENG WENG

having previously co-founded

(RFC4408)

a globally deployed opensource email standard based on a domain-specific language

previously at TSMP (M&A) and at GRIFFITH Rajah & Tann (commercial litigation) a self-taught mathematician

a Caltech PhD previously founder of Wikiscanner and Onion.link

VIRGIL

ONG CHIAH LI a domain expert in startup financings

previously a full-stack VC associate

a host of other contributors

IS NOW WORKING ON

originally an internal project at JFDIAsia

designed to scratch-our-own-itch

up to \$345,000 in legal fees

which will apply

MARC ANDREESSEN's dictum

now being spun out as A SHINY NEW STARTUP

"SOFTWARE IS EATING THE WORLD" to the LEGAL INDUSTRY

by exploiting the UNCANNY PARALLELS (this gets technical; bear with me)

> THE DEVELOPMENT OF and

between

SOFTWARE both of which deal in variable definitions

and other notions which COMPUTER SCIENTISTS are intimately familiar with

event-driven callbacks

exception handling version control

collaborative editing but which LAWYERS

anonymous functions

if/then/else statements dependency graphs

and because, if you think about it, most senior partners alive today were in LAW school when fax machines were new

have no names for

what **ADOBE AUTODESK** has done for has done for ACCOUNTING ART & DESIGN ENGINEERING

LEGALESE

will do for

specifically,

THE \$80B CORPORATE CONTRACTS INDUSTRY *because*

to COPY and PASTE WORDS upon a PAGE FIRST BY DEVELOPING A DOL dubbed "L4"

a DOMAIN-SPECIFIC-LANGUAGE for LEGAL AGREEMENTS and REGULATIONS

that does for the MODAL µ-CALCULUS

what functional languages do for the LAMBDA CALCULUS

and will also target ETHEREUM and other **BLOCKCHAIN PLATFORMS** (because bugs in smart contracts cost real money)

accompanied by a powerful STATIC ANALYZER capable of FORMAL VERIFICATION,

or at any rate EXHAUSTIVE TEST SUITES

that prove, to the extent that such PROOF is MATHEMATICALLY POSSIBLE,

contracts written in the language are

fewer (very advanced) coders write COMPILERS which compile the programs to their final form; but many lawyers ACT AS compilers it's as if they missed the memo

THUS ESTABLISHING A FOUNDATION

just as SQL is foundational to DATABASES

HTML is foundational to THE WEB

POSTSCRIPT is foundational to DIGITAL PRINTING FOR A COMPLETE TECH STACK

THAT CULMINATES IN APPS for end-users not law firms! the first of which (our MVP)

> helps **STARTUPS** generate **ALL** the paperwork needed to close their ANGEL ROUNDS

which is to say not just the TERM SHEET but all the **RESOLUTIONS** and **FILINGS** and other PREREQUISITES which most founders don't know about)

spending TIME or MONEY on

which APPLICATIONS will

slowly but surely

nibble away at the high-volume high-margin replacing largely opensource it with a **NEW INDUSTRY**

which we call

low-margin

automated

POBOX.COM KARMASPHERE.COM exited to FICO exited to Fastmail.fm JFDI.ASIA HACKERSPACE.SG Singapore's first hackerspace Singapore's first startup accelerator and having previously co-authored

ALEXIS CHUN a recovering lawyer

SEBASTIAAN specialising in dependently typed DECKERS

a full-stack Javascript developer at General Assembly

previously teaching web development AND

each equipped with unique superpowers

which humility, not to mention space constraints, forbid adumbrating at this time

LEGALESE.COM

that has by our estimation saved JFDI's 69 startups

THE DRAFTING OF **CONTRACTS**

> not because lawyers are necessarily unintelligent, but simply because law predates computer science by thousands of years

MITH THE SIMPLE GOAL THAT what what INTUIT has done for

(if one may be permitted to speak frankly) in a world where CARS drive THEMSELVES it is QUITE MAD to pay a HUMAN FIVE HUNDRED an HOUR

THEN BY BUILDING COMPILERS which will target ENGLISH and other NATURAL LANGUAGES (imagine multilingual contracts, each provably identical)

CORRECT · CONSISTENT · COMPLETE speaking of which (if one may be frank again) most programmers write PROGRAMS;

translating ideas like IDES, LINTING, BUILD TOOLS, UNIT TESTS and FUZZ TESTING, OPENSOURCE LIBRARIES, VERSION CONTROL, and the rest of the **PROGRAMMER'S ARSENAL** of TOOLS and TECHNIQUES

low-volume manually operated jealously proprietary LAW FIRM
